InternSync – Final Demonstration Script

Version 1.0 · Oct 29, 2026 · Milestone M7 (Dec 15, 2026)

A 15-minute demonstration that shows one function of each increment, on the local Docker stack with fresh demo data. All demo accounts use the password `Demo-2026-pass`.

1. Preparation (the day before and 30 minutes before)

1. **Fresh demo data.** These commands delete everything stored in the local demo and load the demo data again:

   ```
   docker compose down
   docker volume rm internsync_db-data internsync_file-data
   docker compose up -d --build
   docker compose exec api python -m app.seed --demo
   ```

2. **Wait for the model.** The API log shows `embedding model loaded` (about 15 s after start): `docker compose logs api | findstr "model loaded"`.

3. **Browser windows** (one per role, so nobody signs in during the demo):

   - a normal window for the student;
   - private windows for the academic supervisor and the coordinator;
   - a second browser for the company.

   Set each to the language of the audience.

4. **A phone** on the same Wi-Fi network, to scan the certificate's QR code. Find the laptop's address with `ipconfig`; the phone opens `http://<address>:5173`.

5. **Copy to the clipboard** the former student's paragraph (README, "To show a similarity flag").

6. **Open beside the demo:**

   - Key_Results.md for the numbers;
   - the slides (or their PowerPoint download, if there may be no internet).

2. The Demonstration (15 minutes)

Time	Who	What to show	What to say
0:00	–	Slides 1–4	The problem, the five users, and the solution in one picture
2:00	Student `s1@iau.edu.sa`	Training opportunities, Recommended tab: the fit score, matched and missing skills, Advisory label, development plan	Matching uses a multilingual model on our own server; it advises, the student decides (Increment 2)
3:30	Student	My reports: open this week's report, paste the former student's paragraph into "Tasks performed", fill the rest, Submit	Deadlines in Riyadh time; Late is computed by the server (Increment 1)

Time	Who	What to show	What to say
4:30	Academic supervisor `f.alharbi@iau.edu.sa`	Home: the similarity flag; open the report: score, passages side by side; record "Overlap confirmed" with a comment	Compared only with reports of the same university; advisory (Increment 3)
6:00	Company `sara@nakheel.example`	Trainees, then the trainee: record this week's attendance, open the periodic evaluation on the rubric	One rubric for every company (Increment 2)
7:00	Coordinator `coordinator@iau.edu.sa`	Cycles, Summer 2025 (demo), Statistics: the leniency alert, the job-offer rate, the companies' ratings	Information for the coordinator only; the company never sees the students' answers (Increment 4)
8:30	Coordinator	Certificates: open Lama Al-Harbi's certificate PDF; scan its QR code with the phone: Valid, no grade	Code of 128 random bits; the public page never shows the grade
9:30	Coordinator	Exports: the grade sheet in Excel and PDF (Arabic names joined correctly)	100 students in about 1 s (Excel) and 2–5 s (PDF)
10:30	Student (phone or the student window)	Turn off Wi-Fi (or the browser's offline mode): the saved copy with its time; type next week's report; turn Wi-Fi on: the draft is saved	Offline mode (CR-10); submitting still needs the connection
11:30	Coordinator	The summer cycle page, Data retention: the counts, then "Anonymize personal data"; the statistics stay the same	Privacy after the retention period (NFR-PRV-04)
12:30	–	Slides on quality, AI accuracy, and speed (Key Results)	201 automated backend tests, 810 refused permission checks, the honest held-out result
14:00	–	Lessons, open items, thanks	UAT and the online deployment are the open items

3. If Something Fails

Problem	What to do
Docker Desktop does not start	Quit it fully, then start it again. If it reports a socket file that "cannot be accessed by the system", move the folder named in the message aside (for example `%LOCALAPPDATA%\Docker\run`) and start again. **Never choose "Reset to factory defaults" before the demo:** it deletes the demo data
The similarity result shows "pending"	The model is still loading; wait 30 s and reload. The retry job also runs every 5 minutes
No network for the phone	Show the certificate page in a laptop browser at `/verify` and type the code
The anonymization was already run	Show the cycle's statistics and the anonymized names instead; reset the data after the demo
A screen is in the wrong language	The language button at the top switches it for that account

4. Likely Questions

Question	Where the answer is
How do you know the matching works?	Key Results, Section 3; Increment 2 test report, Section 5
What does the similarity check miss?	Reworded copies: Key Results, Section 3; Increment 4 test report, Section 5
How is access controlled?	Design 7.2 and the permission matrix (163 endpoints × every role)
What does it cost to run?	Nothing: Deployment, Section 7

Question	Where the answer is
What changed from the plan?	Change requests CR-01 to CR-11; Final report, Section 5
Which requirements are tested?	Requirements status
